## CASE STUDY

# Proactive Construction Site Security with Mobile Surveillance

## CHALLENGE

Construction sites are inherently vulnerable environments. Valuable equipment, materials, and tools are often left unattended in remote or temporary locations with little to no permanent power or connectivity. As construction site theft continues to rise nationwide, the impact extends beyond stolen assets—causing project delays, insurance complications, and operational disruptions that quickly add up.

AllTime Systems addresses these challenges with mobile surveillance trailers and rapid-deployment security solutions designed for dynamic job sites. Unlike traditional measures such as fencing or periodic patrols, our systems provide real-time visibility, active deterrence, and scalable coverage that adapts as sites evolve. This allows contractors to protect assets, maintain oversight, and reduce risk without relying on fixed infrastructure or costly on-site guards.

## SOLUTION

AllTime Systems deployed mobile surveillance trailers designed specifically for the demands of active construction sites. These units delivered continuous, highly visible security without the need for permanent infrastructure or lengthy setup, making them ideal for fast-moving projects and remote locations. Elevated cameras, integrated lighting, and live remote monitoring worked together to create a strong deterrent while providing real-time visibility into site activity.

To ensure reliability across varied environments, each system supported flexible power options, including solar and hybrid configurations, allowing uninterrupted operation even where electrical access was limited or unavailable. As site conditions changed, the trailers could be easily repositioned to protect critical areas such as equipment storage, material laydown zones, and access points. Centralized monitoring enabled teams to maintain consistent oversight across multiple sites, respond quickly to incidents, and reduce security gaps as projects evolved.

## RESULTS

The deployment of mobile surveillance trailers delivered immediate, measurable impact. Sites protected by these systems experienced a noticeable reduction in theft and vandalism, demonstrating the effectiveness of visible, actively monitored security as a deterrent. By stopping incidents before losses occurred, contractors avoided costly equipment replacement, schedule delays, and operational disruptions—often preserving tens of thousands of dollars per prevented event.

Beyond direct cost savings, project leaders gained greater confidence and control over site security. Reduced reliance on overnight patrols lowered recurring expenses, while recorded footage improved documentation for insurance, investigations, and compliance. Most importantly, security shifted from a reactive cost center to a proactive risk-management tool—helping contractors safeguard assets, maintain project timelines, and operate with greater predictability.

## WHY ALLTIME SYSTEMS?

When security, uptime, and visibility are critical, organizations rely on AllTime Systems. Our mobile surveillance platforms are engineered to deliver continuous, dependable monitoring across construction sites, critical infrastructure, public spaces, and remote locations. With self-sustaining power options and real-time system health monitoring, AllTime Systems ensures surveillance assets remain operational, connected, and responsive at all times. Proactive alerts, live status data, and remote management allow teams to address issues early—before they impact operations.

Designed and built in the USA, AllTime Systems' solutions are built for durability, scalability, and long-term adaptability. Backed by experienced support teams and proven performance in demanding environments, we partner with organizations to protect assets, maintain operational confidence, and deliver peace of mind where it matters most.

## STANDARD OPTIONS

### CAMERAS

PTZ, FIXED,  
360°, ALPR

### DETECTION

CAMERA ANALYTICS,  
DUAL MOTION,  
RADAR, LIDAR

### RECORDING

ON BOARD, REMOTE  
& CLOUD VIDEO  
STORAGE

### DETERRENTS

TOP MAST &  
BODY STROBES,  
SIRENS, AUDIO
